Profile

Out of curiosity and a desire to understand what happens behind the scenes of a website, I began learning the core concepts of software applications. Fast forward a few years — through grit, moments of failure, and relentless self-motivation, I am proud to now call myself a Software Engineer with over 7 years of experience building scalable user interfaces. Throughout my career, I have primarily focused on Frontend development. However, driven by the same curiosity and appetite for growth that sparked my journey, I expanded into building backend and mobile systems, leveraging the JavaScript runtime. I specialize in translating pixel-perfect designs into high-quality code while integrating backend functionality to meet critical business needs. I am passionate about problem-solving and proficient across all stages of the Software Development Life Cycle (SDLC), always utilizing the best tools for the job.

Professional Experience

Senior Frontend Engineer, *Producers Incentive Network https://producerspin.com* 03/2025
Remote, USA

- Efficient code reviews before being merged to production and pair coding session with the team of developers.
